unique in their width,
resolution and quality.

simplicity zones

The Simplicity 'smart locker' system brings a whole new concept to "personal storage" and introduces a truly 'hot-lockering' aspect with its locker management software option.

The 'Simplicity' locker system provides a real solution to the facility management team faced with the prospect of providing staff with lockers when an 'Agile Working' accommodation strategy is to be adopted. It means that the FM team no longer need worry about providing thousands of keys for individual lockers or the security risks due to key duplication, as the lockers work with your current 'access card' entry system.

When coupled with our locker management software, it allows a business to significantly reduce the number

of personal lockers required, along with the physical office space that would consume. Meaning high cumulative savings are achieved, both in management time, space and overall cost to the business.

about our images

In conjunction with photographic art company, Blue Pearl Photographic, we have available a unique collection of high, super-high, and ultra-resolution images. They are perfect for transforming workspaces and introducing the 'wow factor'.

Taken by British photographic artist Richard Osbourne over 12 years, it contains a wide range of photographs of Britain and other countries, plus many abstract images suitable for textures and pattern backgrounds. All images have been taken on the highest quality equipment, using meticulous technique and have an integrity and quality that is immediately obvious when printed at large sizes.

Richard's 700 super-wide panoramic images in particular are unique: ranging from 500MB to 2GB, and up to 11:1 aspect ratio, they work perfectly for very long runs of lockers. High resolution images give a very satisfying sense of 'being there' that cannot be matched by low resolution files that have been blown up to large sizes. Pixellation, 'jaggies', blotches, poor colour...you won't find these things in any of these images when used at larger sizes.

Images are printed using the latest very long-life, environmentally-friendly latex printing technology and laminated with either super-gloss or matt laminates, ensuring they are highly scuff-resistant and durable.
